Test Directory: variable_refinement_test

Test Description

This report contains the results of variable initial mesh refinement tests.

Tests included:

1. Solver reset with different refinement options
2. Environment reset with different refinement options
3. Coarsening behavior with different initial refinements
4. Barrier function implications for different refinement levels

These tests evaluate the implementation of variable initial mesh refinement and its effects on the agent's ability to learn coarsening behavior.

Visualizations Included

1. reset_with_refinement.png
2. element_counts.png
